

# Enhancements since Version 1.1.x

## Online Providers

LoKI now supports online providers such as OpenAI GPT-5 and Claude Sonnet. Online models appear directly in the model list next to local GGUF models.

## Live Streaming

Responses from OpenAI and Claude are streamed token by token. This improves responsiveness and makes tool execution visible while running.

## Tool Permissions

LoKI displays all detected MCP tools in a tile-based interface. For online providers, permissions can be configured individually per tool.

## Channels

LoKI supports external communication channels such as WhatsApp and Telegram. Incoming chats automatically appear in LoKI's memory list.

## WhatsApp Modes

The WhatsApp connector supports both Linked Device mode and a dedicated WhatsApp account using its own SIM card.

## Agent Mode

LoKI can autonomously perform complex tasks in multiple steps. This can be configured in the settings (Max Steps). The model independently decides which tools to use.
